

----> **Deadline:** deliver the two challenges by sunday 23.59h

Challenges Week 2

Challenge 1 - flex and grid challenges (70 pts)

It's very important to practice a repeat things. In this challenge you have to complete these two tiny modules from FreeCodeCamp:

Responsive Web Design Certification

→ CSS Flexbox

→ CSS Grid

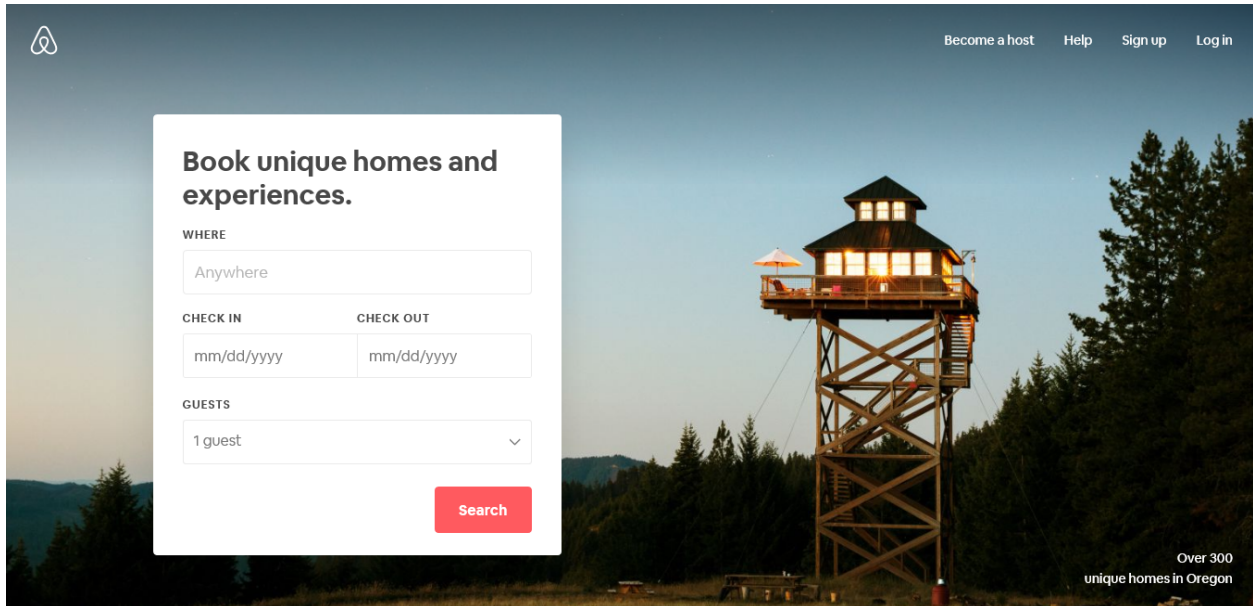

This may be helpful --->

<https://yoksel.github.io/flex-cheatsheet/>

Challenge 2 - Airbnb Clone (150 pts)

O nome da pasta tem de ser ---> **airbnb**

The only way of getting good at building websites is by building websites! In this challenges you must do an airbnb.com clone. This one is even easier than medium. This version:

The same rules we followed on medium apply here, same colors, fonts, etc, everything very close to the original.

You can't use position absolute, position relative or floats, (will not be accepted). We want to practice flex, grid and inlines / inline-block, etc

Just a static page, effects and responsivity are not necessary, 1 screen only (desktop).

---> If you don't get this version of airbnb, clear your browser cache/history or open an anonymous tab.

---> Tip: To put that large image on the first section of the website use background-image, everything will be easier !

You don't have to put dozens of boxes since it's repeating a lot of stuff, just clone the website until this point (including):

Homes for your kind of trip

Find a top-rated home with amenities you need

Family

2,000+ HOMES

Find a home that families love. Stretch out and enjoy a space of your own.

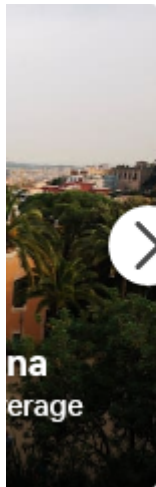

Work

2,000+ HOMES

Book a top-rated home that offers reservation flexibility and work-trip essentials.

Also, you don't need to put the button on the slider for now, in the future we'll use position absolute to do it :

Ignore the slider effect, we'll not do it for now.
